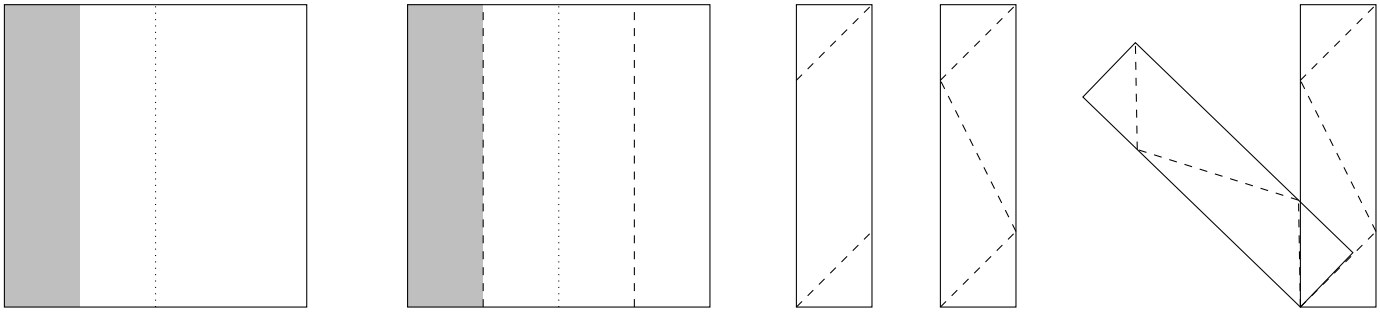
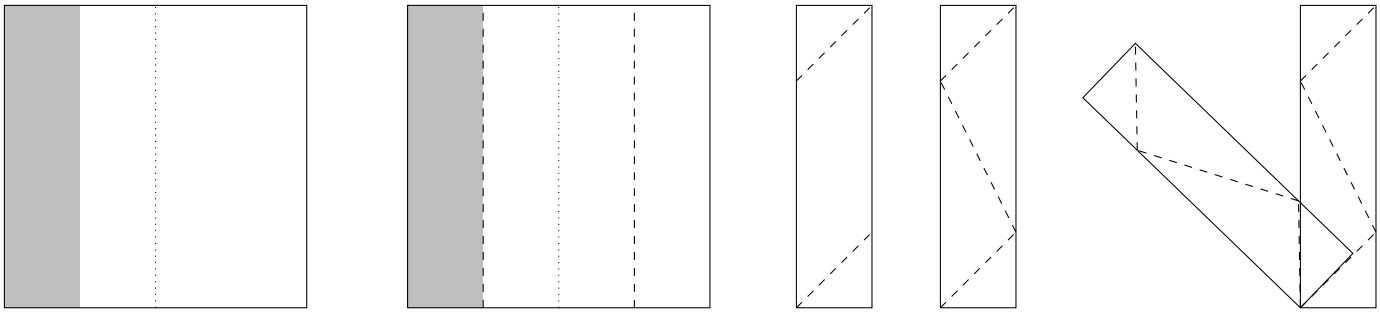
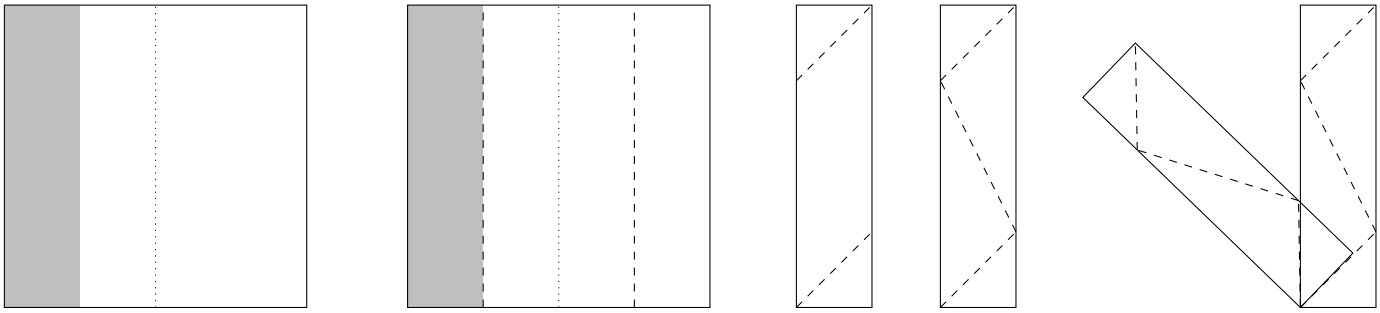
Fold back on dotted lines and forward on dashed lines.

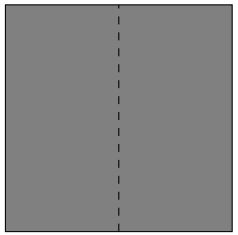


Fold back on dotted lines and forward on dashed lines.

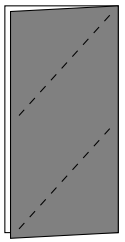


Fold back on dotted lines and forward on dashed lines.

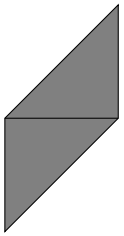




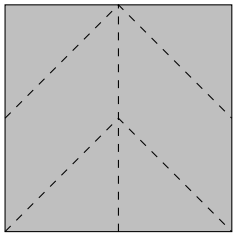
Fold paper in half



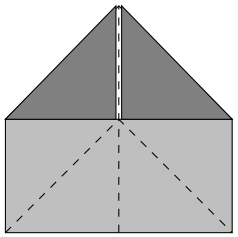
Bring one corner to opposite edge to form a triangle and repeat with opposite corner



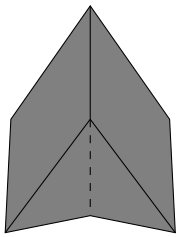
You should see a parallelogram



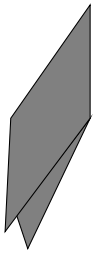
Open the paper



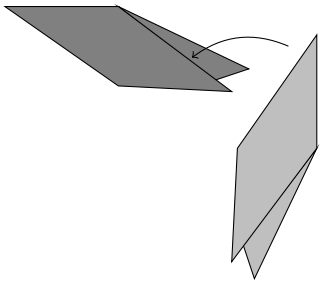
Fold top two corners to the centering and flip the paper over.



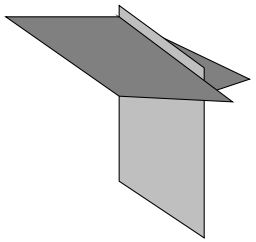
Push the large triangular region inside



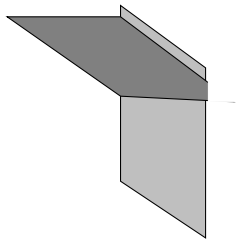
Flatten the parallelogram to complete the module. Make seven more modules.



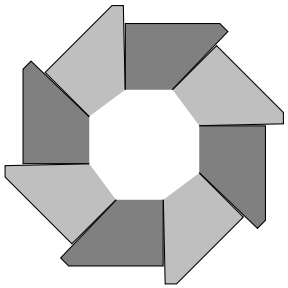
Insesrt one piece into another so that the folded edge of each module is on the outside



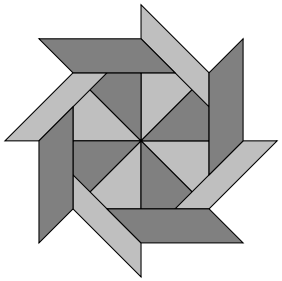
Be sure to tuck the inside piece as far into the fold as possible



Tuck the corners of the outside module into the grove of the inside module as snuggly as possible



Continue to add modules around the octagon. Tuck the corners of the last module on either side of the parallelogram inside the first module.



Push gently to transform into a pinwheel. If necessary, sharpen the creases and slide it in and out a few times.
